

winter 2019/20

Direct's celebrating its birthday...!

Yes, friends, this year it's 20 years already since Direct sold its first clothes! Which is a cause for celebration and a time for gifts.

The biggest gift to mark this anniversary is probably the **film** made for us by Petr "Spek" Slanina and Honza Simanek. We had many discussions with them about the form it would take, during which time we managed to do some climbing in Klokocky. As it happened, the film turned out OK – winning the audience prize at the International Mountaineering Film Festival in Teplice nad Metuji. Thanks a lot to you and the boys.

Another gift, although not one for us directly, was the **Piolets d'Or** prize for Zdenek Hak, our ambassador, and Marek Holecek. First time ever in the Czech Republic. Awesome!!!

But on this occasion, I'd especially like to thank you, our partners. For your belief, your patience and your support. Without you we'd never have managed. Thanks, and thanks to each one of you!

And what does the future hold? What lies ahead for Direct Alpine in the years to come?

"Direct" is the fastest line to the summit, the path to your goal, no compromises... This you already know. All the same, the word perfectly encapsulates who we are and who we still want to be.

This year's models prove that we haven't stood still since last season's promises. We've been investing in colour – creating patterns for double the number of **new models** and colour combinations, with the aim being to colour co-ordinate the whole collection. We're sure you'll be big fans.

In the upcoming seasons we'll be focusing more intensely on our women's collection, and on the collection for rock climbers, where we're seeing a clear trend away from rock climbing being seen as an extreme sport, to something much more commonplace, almost an everyday sporting activity.

DIRECTALPINE

TECHNICAL OUTDOOR WEAR

We also want to carry on expanding production capacity here in the Czech Republic, possibly elsewhere in Europe, so that we can be sure that our clothing is manufactured according to European social and environmental standards.

Environmental impact is another area that in future we want to pay even more attention to than we've done before. Together we've set out a plan how to reduce our impact on the environment, while ensuring our products remain fully functional. You can read about some of the details in the following pages of the catalogue. This doesn't mean that we've been doing nothing in this area before now. I don't know whether you're aware of the fact, but all our products have been **PFOA-free** since 2016, even though the European standard banning the use of these potentially hazardous compounds does not come into force until 2020.

Even so, the plan we've drawn up sets out an even more ambitious target. This is to reduce the volume

of all **PFC** compounds across our product range. We freely admit, however, that despite close collaboration with our textile suppliers, we have not yet found any substitute technology that would satisfy our demanding requirements. Unfortunately, our field and laboratory tests clearly show that there are no suitable alternatives at the moment to PFCs when it comes to extreme applications.

But let's put to one side all this shop talk. I'm sure that you, like us, have managed to shut the door firmly behind you on daily life and enjoy great days out in the sort of places where you can really use our products. If at the same time you've managed to accomplish some long dreamt-after goals, then good for you. If not, here's some good news: you've got the perfect reason to head out once again!

I wish you a beautiful autumn – a time of wine harvests, golden leaves and distant views – framed in blue skies – of the peaks you're aiming to climb.

Yours, Jiri Doubrava

DIRECT ALPINE ECO plan – w19 Catalog

Collection & use of materials

Elimination of PFC and PFOA repellents

- From 2016 – whole collection PFOA free
- W19 collection – reduction in all PFCs by 30 % (compared with W18 collection)
- W20 collection (plan) – reduction in all PFCs by 60 % (compared with W18 collection)

Maintaining our current top-quality level of products:

- long user-life, low consumption, long-term sustainability.

Greater use of recycled materials

- W19 Collection – minimum of 20 % recycled material to be used in the collection (as opposed to W18 collection), e.g. PATROL, MOUNTAINER etc.
- W20 Collection (plan) – minimum of 35 % use of recycled material to be used in the collection (as opposed to W18 collection)

Service & Repair:

- Guarantee and post guarantee care – possibility of prolonging the user life of products.

Emphasis on the use of BIO materials

- W20 Collection (plan) – 100 % of cotton T- shirts to be produced from organically-grown cotton.

Packaging materials

- W19 Collection – reduction of all PFCs by 15 % (compared with W18 collection)
- W20 Collection (plan) – reduction in the volume of plastic packaging by 20 % (compared with W18 collection)
- W20 Collection (plan) – all our own clothing tags to be made from recycled material.

Production process and logistics

Increased ecological demands placed on our suppliers

- W19 Collection - 80 % of our material suppliers and 50 % of our suppliers of plastic components certified in accordance with STANDARD 100 (OEKO-TEX)

Production of finished products - W19 and W20 collections

- keeping the maximum share of products manufactured in Europe in line with EU standards. If, however, it is necessary to use production outside the EU then there shall be strict adherence to the conditions laid out by the Fair Ware Foundation and OEKO-Tex 100.

Transport of materials

- To the year 2020 – limiting air freight of materials by 50 %

The company's operation

Separation of waste

- Plan for 2019 for a minimum of 15% reductions in the consumption of paper.

Complete use of recycled paper manufactured in the EU

Reduced CO₂ emissions

- Plan for 2019 - Change in how the building is heated.

MOUNTAIN TOP SERIES

The Mountain Top Serie of technical models is intended for demanding activities in mountain conditions, for expeditions and for other extreme activities.

During the development of this clothing we stress maximum utility value, comfort of movement and protection of the user. We use the latest technology and cutting-edge components, and we carefully select intelligent, multifunctional materials which guarantee excellent properties and parameters even at relatively low weights. We focus maximum attention on the overall processing of the models and their cut.

The characteristic traits of this range are the technical design, functional accessories, details for the given use and practical colours. For our customers the products of the Mountain Top Serie represent their assurance in the mountains, on expeditions, on cliffs or for regular outdoor use. They know that they can always rely on them!

The Mountain Top Serie represents the traditional values of the brand DIRECT ALPINE – uncompromising quality, functionality and reliability.

Revolt

A flagship of the Directalpine collection. A top quality technical jacket for the most demanding mountain activities in a new improved design. Comfortable, stretch hardshell with a revolutionary technological 3D membrane providing very high breathability.

The deliberately simple construction of this garment eliminates the risk of damage and, thanks to the high quality cut, it hangs extremely well. The shoulders have now been reinforced with tough, fray-resistant protectors. Reliability, comfort, low weight and packability are the leading features of this unique jacket which can be used all year round for mountain climbing, VHT, hiking and skiing.

Material

Main: 3L GELANOTS Dry Shell

(100% Nylon T66, DWR) 25.000 mm H₂O/40.000 g/m²/24H,
3D bi-component circular knit wicking mesh - [H01]

Features

- Thanks to the asymmetric main zipper there is no rough strengthening across the face (the chin and the mouth) like in the case of standard straight main zippers. In addition zipper freezing by frozen exhaled air is eliminated.
- Practical, large, easy to access pocket on chest. Zip pocket inside with outlet for electric cables. Additional pocket on left shoulder.
- Bottom edge adjustable one-handed with elastic cord (even when wearing gloves).
- The front part is shortened and shaped for free movement of thighs during ascending. Extended backside.
- Outer zips waterproof. Central zip and zip of the main pocket reinforced for extra stability.
- Recco signal reflector.
- Side zip entrances accessible also when carrying a backpack - allow access to the lower layers while venting the body. Pit zips for ventilation.
- Possibility to open the jacket on the right side for enhanced mobility or when sitting down.
- Anatomically formed sleeves for freedom of arm movement. Shaped cuffs with Velcro adjustment.

LAMES GUIDE LADY PAGE 53
VERSION

This top quality protective jacket for the most demanding exertions has been given an adjusted cut and a more resistant material used for the collar and cuffs to give it a longer user life.

Guide is the ideal jacket for mountaineering, hiking and alpine skiing. It has minimal weight and, at the same time, the durability of classic hardshell. The combination of resistant materials, minimal weight, precise anatomically-fitting cut, a range of technical details and the use of modern technology makes this the ideal functional back-up jacket that will never let you down. Assuredness, comfort and protection against inclement weather for all your adventures in the wild.

Main: 3L GELANOTS HB hardshell

(100% Nylon,DWR) 20.000 mm H₂O/39.000 g/m²/24H - [H02]

Support: 3L GELANOTS hardshell

(100% Nylon, DWR) 20.000 mm H₂O/20.000 g/m²/24H - [H03]

Weight: 416 g (L)

Sizes: S, M, L, XL, XXL

Style: REGULAR FIT

black/anthr. black/petrol blue/indigo green/indigo aurora/indigo

Features

- Stiff hood with multidirectional adjustment which can be pulled over a helmet.
- Raised front collar to protect the face, ventilation openings, an asymmetrical central zip which doesn't touch the face, the unzipped insert can be secured (by magnets) to the inside of the hood.
- Reinforced front collar, shoulders, rear part, cuffs. Large bellows front pocket, one inner zip pocket, an additional pocket on the sleeve with a space for a Recco signal reflector.
- Central two-way zip with protective inner hem.
- Uses materials with wonderful breathability.
- Side vents which are easily reachable even when wearing a backpack, zips extending into the front part giving access to base layer pockets.
- Back part elasticated at the waist to make it more figure hugging at the back.
- Anatomically shaped sleeves with adjustable, reinforced cuffs. Shaped bottom edge for comfortable leg movement, extended rear part.

Midi

Very lightweight upper reserve pants with excellent compressibility. A high quality functional 3-layer laminate with the weight of a two and a half layer one, with significantly higher lifespan and resilience.

Comfortable and stretchy material. Technical treatment and details allowing year-round seasonal use. Ideal reserve pants for mountain hiking, mountain climbing, ski touring and all outdoor activities.

Material

Main: 3L DERMIZAX hardshell

(100% Nylon, DWR) 20.000 mm H₂O/8.000 g/m²/24H - [H04]

Reinforcement: (87 % Kevlar + 13 % Aramid) - [R01]

Colors: black

Weight: 470 g (L)

Sizes: XS, S, M, L, XL, XXL

Style: REGULAR FIT

Features

- Comfortable elastic waistband with possibility to use belt, clip-on braces.
- Fly with water-repellent zip with two way sliders.
- One zip pocket which also serves as a practical transport pocket when the pants are rolled up.
- Water-repellent side zips asymmetrically moved to the rear parts (elimination of damage) allowing ventilation and, most importantly, allowing the pants to be put on over boots (including ski boots).
- Lower edge of legs with circumference regulation, sufficiently wide to fit even over ski boots, with additional securing hook for clipping the lower part onto laces.
- Inner side of knees reinforced with wear-resistant fabric.

Tested by mountain guide (UIAGM) Zdeněk Hák on the SATISFACTION - GASHERBRUM I expedition. Háček says:

„On Gash I took with me things from Direct that I know and use, and I knew they wouldn't disappoint in any situation... I tell you, on the Gash these pants really surprised me! I originally wanted to do the whole route in classic DEVIL ALPINES but then I decided to try and cut down on weight and save a few grams. So I plumped for MIDI. I really put them through the mill but they stood the test!! To tell you the truth, I was very surprised at how much they stood up to and how well they are cut (which, for that matter, all your pants are). Yeah, they picked up a small hole from crampons. I was pretty tough on them, but then again, as always, it only costs a few crowns to repair them, doesn't it? MIDI were the biggest positive surprise of the trip when it comes to equipment. A big thank-you for these great pants!”

INNOVATION

Eiger

These are functional pants with a highly technical cut for all kinds of winter sports.

Thanks to their hybrid construction, which makes use of modern materials, wonderful tailoring and ingenious technical details, these pants provide a universal solution for any kind of winter sport - from skiing to one-day alpine skiing and backcountry expeditions, to winter mountaineering activities at all levels, no limits. The comfortable, elastic softshell material, Pertex®Shield, which has been specially developed for fast, high aerobic, high-performance activity, is supplemented by a light, 3-layer hardshell lower leg to make the garment lighter. The legs are sufficiently wide to pull over a pair of winter boots or ski boots. The aperture of the leg cuff can be adjusted by means of two tapes with Velcro. Their perfect anatomical cut is derived from the natural shape of the human body and copies its movement during sport. These pants fit so well and give maximum comfort.

LAMIES
VERSION

BORA LADY PAGE 54

A light, wonderfully packable jacket in an attractive, new design. The outer layer is from an extremely light material, Pertex Quantum Air while the hood, sides and forearms are made from a breathable, resistant material, Swing Cool. This jacket uses modern, elastic, highly-breathable Alpha-Polartec insulation without a lining to reduce weight.

It's anatomically cut, using a combination of functional materials, to create a wonderful backup insulated jacket particularly suitable for aerobic activity. Thanks to its superb wind resistance it will protect you in inclement climatic conditions, minimizing loss of body temperature. This perfect, breathable, comfortable jacket is a clear choice for mountaineering, alpine skiing or even for casual trips and all common outdoor activities.

Material

Main: PERTEX QUANTUM AIR (100% PAD, DWR) - [U01]

Insulation: POLARTEC® ALPHA (100% PES) - [I01]

Support: Rip-stop stretch fabric

(85% Nylon + 15% Spandex, DWR) - [W01]

Weight: 347 g (L)

Sizes: S, M, L, XL, XXL

Style: REGULAR FIT

Features

- Hood made from Swing Cool material incorporated into the collar
- Two side zip-pockets which don't interfere with the waist.
- Sleeves with underarm inserts to give high arm mobility.
- Elastic panels of Swing Cool material sewn into the sides – good insulation close to the body.
- Bottom edge of the jacket can be drawn in with one hand
- Breathable, elastic forearms from Swing Cool material with practical elasticated endings.

Material
INNOVATION

Alpha Active

This innovative, functional jacket is a must for every devotee of active movement. It is particularly favored by alpine skiers, cross-country skiers, climbers and high-mountain hikers.

This highly technical hybrid model works on the principle of protecting and insulating the mid part of the body with the light material, Pertex Air, and the extremely breathable Polartec insulation, while the side parts and sleeves are kept lighter and breathable through the use of a modern structured material, Tecnostretch (grit fleece). The result is a wonderfully fitting, light insulated jacket which ensures ideal warmth and comfort while active in cold weather and provides protection from wind. At the same time, it's very breathable and wicks away sweat from the body to give the wearer greater comfort. Wonderfully usable as a top protection layer against wind or as light insulation under a hardshell jacket.

Material

Main: PERTEX QUANTUM AIR (100% PAD, DWR) - [U01]

Insulation: POLARTEC® APLHA (100% PES) - [I01]

Support: Tecnostretch grid Fleece (91% PES + 9% Elastan) - [F01]

Features

- Wonderfully fitting, light, insulated hood.
- Two breast pockets and two zipped side pockets.
- Elastic, anatomically shaped sleeves to give freer arm movement.
- Breathable elastic side panels.
- Simple drawstring on the bottom edge of the jacket.

Weight: 377 g (L)

Sizes: S, M, L, XL, XXL

Style: SPORT FIT

Alpha Vest

An extraordinary light and very packable body warmer. The inner material is Pertex Microlight supplemented with highly durable Pertex Quantum on the collar and shoulders. Modern, elastic, highly breathable Alpha-Polartec insulation, now without a lining for reduced weight and even better aeration.

Its anatomical cut, in combination with the functional materials used, creates a comfortable, light insulation layer particularly suitable for aerobic activities. Thanks to its wonderful wind resistance it ensures protection even in the most inclement climatic conditions, minimizing the loss of body temperature. A bodywarmer which you will be sure to want with you on any mountain trip, whether alpine skiing, or on outings or as a wonderful, light backup for any kind of outdoor activity.

Material

Main: PERTEX® QUANTUM AIR (100% PAD, DWR) - [U01]

Insulation: POLARTEC® APLHA (100% PES) - [I01]

Features

- Soft, close-fitting, warm collar.
- Anatomically shaped covering of shoulder joints to increase warmth and comfort.
- Two side zip pockets above the waist.
- Side panels without insulation for maximum weight reduction.
- A simple, easy to adjust, elasticated drawstring in the bottom seam of the jacket.

Mistral

The solution for all alpine skiers, climbers and mountaineers. A jacket for the real sportsperson. MISTRAL is a perfectly example of the ideal cut and an ingenious combination of functional materials.

It is intended particularly for outdoor enthusiasts looking for a universal jacket for the widest range of demanding outdoor activities. The hybrid construction of this jacket cleverly combines two types of resistant softshell with Cordura: stronger one for higher protection and lighter one for weight-saving and packability. The shoulders are reinforced with stiffened, high-resistance material with a membrane. Elastic inserts in the sides and forearm ensure great mobility and maximum breathability. In short, Mistral is the perfect jacket for active sportspeople all year round. Alpine and cross-country skiing, climbing, cycling, hiking – maximum comfort wherever you are.

NEW

New functional pants with a highly technical cut, specially developed for alpine skiing, one-day backcountry expeditions, ice climbing and mixed climbing as well as recreational cross-country skiing.

Technical details, choice of materials and cut - in all of these we've been guided by the demands you place on your winter sports equipment. The main material used in exposed parts of the garment is fray-resistant and stretchy with an inner Thermolite® layer. Furthermore, it's supplemented with panels of very stretchy, breathable material for effective ventilation of excess heat. The pleasant inner side allows them to be worn next to the skin. Functional elements maximize your comfort and ease your performance in your favorite sport: For easy switching between walking and skiing of your alpine ski boots, the opening in the bottom rear side of the leg has a Velcro fastener to prevent snow getting into your pants and a loop for easy manipulation while wearing gloves. The lower part of the legs is fitted with a two-way zip which allows them to be opened when putting on and taking off boots so they give easy access to the fasteners on alpine ski boots. Their perfect anatomical cut is derived from the natural shape of the human body and copies its movement in sport. These pants sit perfectly and provide maximum comfort.

Material

Main 1: Abrasion resistant brushed fabric

(23 % Cordura® + 45 % PAD + 23 % Thermolite® + 9 % PUR, DWR) - [W02]

Main 2: Rip-stop stretch fabric

(85 % Nylon + 15 % Spandex, DWR) - [W01]

Support: Elastic fabric - 80 % Nylon (PAD) + 20 % Elastan (PUR) - [F07]

Reinforcement: 87 % Kevlar (PAD) + 13 % Aramid (PAD) - [R01]

Weight: 489 g (L)

Sizes: S, M, L, XL, XXL

Style: REGULAR FIT

black/ grey black/ petrol indigo/ green indigo/ aurora

Features

- Adjustable elasticated waistband with a strap with a metal clasp and fastenings to attach braces.
- Roomy thigh pockets with water resistant zips e.g. for map, one smaller zip-pocket front right for ski pass or keys.
- Zipped fly.
- Elasticated panels in the lower part of the back for maximum freedom of movement.
- Crotch insert from a very stretchy, breathable material for freer movement and warmth.
- Side zips with two-way riders can be used for venting excess heat. The opening is backed with netting so that snow doesn't fall into the pants leg.
- Anatomically shaped knees.
- Two-way zips on the bottom inner side of the legs.
- The zips can be managed even when wearing gloves.
- An opening to manage switching from walking and skiing mode in alpine ski boots.
- The width of the leg ending can be adjusted by poppers and an elasticated drawstring with a hook.
- Stiffening in the lower inner side of the leg protects against damage from the edges of skis, crampon studs and rocks.
- Reflexive cross-stitching on the legs above the knees.
- Recco® signal reflector.

Couloir Plus

BESTSELLER

LADIES COULOIR LADY PAGE 55
VERSION

Top-layer softshell pants, suitable for colder, windier conditions. Primarily intended for winter exercise in the mountains, particularly alpine skiing.

Thanks to the arrangement of parts with different directions of stretchability these pants sit wonderfully and allow a high degree of movement. This hybrid combination of materials increases the physiological functionality of this model (Hybrid system). Thanks to the new lining they are lighter and better at wicking away sweat from the skin. Ideal pants for alpine skiing and other winter activities.

Material

Main: 2L Dynamic softshell

(65 % Nylon + 23 % PES + 12 % PUR, DWR) - wind resistant - [S02]

Support: 3L 4way Tex® softshell

10.000 mm H₂O/10.000 g/m²/24H (DWR) - [S03]

Reinforcement: 3L abrasion resistant softshell

5.000 mm H₂O/5.000 g/m²/24H (DWR) - [S04]

Weight: 685 g (L)

Sizes: S, M, L, XL, XXL

Style: REGULAR FIT

LADIES CASCADE LADY PAGE 56
VERSION

Cascade Plus

Very comfortable, well-designed year-round trousers for the widest range of outdoor activities. Completely universal trousers, can be used very well for trekking, mountain climbing, climbing, hiking, cycling or everyday wear.

They have long been a popular model, in particular because of the great and effective combination of functional materials and very well designed comfortable cut. Thanks to the combed bottom (inside) side of the basic parts ideal for whole year. Anatomically exact cut for unlimited mobility. Used fabrics with high elasticity and resistance. Hybrid combination of materials with fast-dry (vapour transportation) and thermo-insulating adjustment (maintaining body temperature).

Material

Main 1: Abrasion resistant brushed fabric - (23 % Cordura® + 45 % PAD + 23 % Thermolite® + 9 % PUR, DWR) - [W02]

Main 2: Cordura® WBL system - (46 % Cordura® + 32 % Tactel® + 14 % Lycra® + 8 % Coolmax®, DWR) - [D01]

Support: Functional elastic fabric

(84 % Nylon (PAD) + 16 % Elastan (PUR) - [F06]

Reinforcement: (59 % Nylon + 33 % PES + 8 % PUR) - [R02]

Colors: black, greyblue, blue, indigo, green, aurora

Weight: 483 g (L)

Sizes: S, M, L, XL, XXL

black: M-short, L-short, XL-short, XXL-short
M-long, L-long, XL-long, XXL-long

blue: M-short, L-short, XL-short, XXL-short

Style: REGULAR FIT

Features

- Comfortable waist, belt adjustment.
- Two front and one side pocket (accessible even when wearing harness).
- The basic mixed textile Cordura completed on the inside with combed polyester (warm and moisture absorbent).
- Accessory materials – thin Cordura and elastic combed knitwear.
- Trousers with bottom edge regulation, covered side zipper and elastic wedge for comfortable pulling over trekking boots.
- Abrasion-resistant material on knees and bottom rims.
- Bottom rim adjustment, side zip and elastic gusset. Hook for fastening to boots.
- Fly with two-way zip.

Alpamayo

NEW

A new addition to our range of winter jackets, ALPAMAYO is a very warm but also light insulated jacket with an advanced synthetic filling of Primaloft® Thermo Plume, a material which has high loft, excellent heat resistance and wonderful thermal properties.

It is particularly suitable for less demanding aerobic winter activities – downhill skiing, bivouacing, skating, trips in the countryside on snowshoes and suchlike. This jacket uses the classic H construction of closed chambers and a minimum of cold zones. Thanks to this, body warmth doesn't escape into the open. The light surface material, Pertex® Quantum, with a mini rip- stop binding is supplemented on the shoulders with Pertex® Quantum Pro which protects the jacket from being damaged by the shoulder straps of a backpack. The deep, insulated hood with a fastener at the back protects the head and, thanks to the integrated collar, also protects the neck area from cold wind and snow. The looser anatomical cut allows optimal freedom of movement and the extended back part protects the lower back from chills. The sleeves are sufficiently long and have anatomically shaped elbows and elasticated cuffs, so they stay in place and won't let even a flake of snow in. The narrow cuff also means that gloves can be pulled over the sleeves. A significant priority of this jacket is its easy maintenance and that it can be washed in a washing machine on a standard program.

Material

Main: Pertex Quantum (100% PAD, DWR) - [U02]

Insulation: Primaloft Thermo Plume (250 g), Fill power 550 cuin (100% PES), high performing blowable insulation - [I02]

Reinforcement: Pertex Quantum Pro (100% PAD with PU coating) - [U03]

Weight: 603 g (L)

Sizes: S, M, L, XL, XXL

Style: REGULAR FIT

black blue

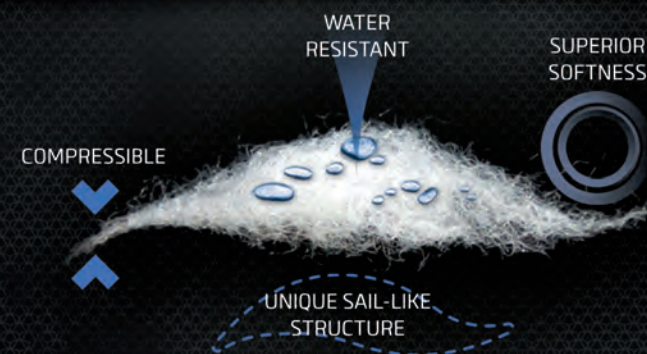

Features

- Insulated, firm hood with an elasticated drawstring and adjustment at the back of the head.
- High, insulated collar integrated into the hood.
- New synthetic insulation material, H-Construction.
- Main zip has a protective stop in the chin area.
- Anatomical cut.
- Shaped sleeves.
- Extended back part.
- Elasticated hems on sleeve endings.
- Two front pockets with zips.
- One inside pocket.
- Reinforced shoulders and upper back.
- Simple elasticated drawstring in the bottom hem.

PRIMALOFT® BLACK INSULATION THERMOPLUME

PrimaLoft® is a registered trademark of PrimaLoft, Inc. ©2017 PrimaLoft, Inc.

Foraker

A warm, technically insulated sports jacket using the modern, very warm Polartec Powerfill. A purpose-made hybrid combination of two Pertex materials - the shoulders and hood are from durable Pertex Quantum and the rest from light Pertex Quantum Air.

This jacket uses the combination of two insulation densities to give the most effective thermoregulation and weight. This use of quality materials, the developed cut, and the elimination of all unnecessary details has produced a light technical jacket with maximum functionality for demanding climatic conditions. Great for winter mountaineering, ice climbing, mountain skiing and expeditions. This model has been developed with great emphasis on functionality, anatomy and maximum simplicity to eliminate possible problems, which is an important precondition for the most demanding activities.

Material

Main: Pertex Quantum Air (100% PAD, DWR - acrylic coating) - [U01]

Insulation: Polartec Power Fill

136 g/m² + 80 g/m² (100% RECYCLED PES) - [I03]

Reinforcement: Pertex Quantum Pro (100% PAD with PU coating) - [U03]

Weight: 618 g (L)

Sizes: S, M, L, XL, XXL

Style: REGULAR FIT

blue/indigo green/blue

Features

- The hood can be pulled over a helmet, fully adjustable.
- Asymmetrical zip doesn't obstruct and doesn't frost up with breath.
- Shaped underarm vents which also give practical access to pockets in base layer clothing.
- Two voluminous net pockets inside (for gloves, seal tapes etc.).
- Upper saddle and shoulder have no dividing seam for increased durability.
- Two side zip-pockets, one breast pocket and an extra zip-pocket on the sleeve.
- The underarm cut of the jacket allows for big arm movements and will not ride up even when raising your arms.
- Anatomical sleeves with simple adjustable openings. The sleeve openings can be drawn over gloves (without tapes, Velcro and without cuffs = functional and simple!).
- All zips are covered by insulation or an insulated hem.
- The bottom shaped edge of the jacket has a simple drawstring.
- The jacket can be packed into the hood.

Impulse

Material
INNOVATION
LADIES FREYA LADY PAGE 57
VERSION

Every mountain climber, alpine skier or enthusiast should have the new Impulse insulated jacket as part of their gear when they're out on the mountains in winter.

Thanks to the use of special materials and a specially designed hybrid construction, this jacket is very light and packable and at the same time fully functional. We've used two different weightings of the top insulation fabric, PrimaLoft Gold Active Plus. The heavier material is used on the body for high protection against cold, quilted with stylish technical stitching to prevent riding. A light insulating material is used in the sides and sleeves to ensure better breathability and free arm movement. The outer material, Pertex Quantum Air, gives perfect wind protection. Impulse is the ideal jacket for any kind of outdoor adventure, either as an outer layer or as an insulation layer under a hardshell jacket.

Material

Main: Pertex Quantum Air (100% PAD, DWR - acrylic coating) - [U01]

Insulation: PrimaLoft® Gold Active

133g/m² and 60g/m² (100% PES) - [I04]

Features

- A light, lined hood that can be worn under a helmet.
- The jacket can be packed into the hood.
- Attractive quilted material
- Anatomically shaped sleeves.
- Two main zip pockets, one additional inner zipped pocket.
- Elasticated cuffs.

Weight: 381 g (L)

Sizes: S, M, L, XL, XXL

Logan

Material
INNOVATION

Insulated sports shorts with wonderful PrimaLoft® insulation, in an attractive new design.

A special combination of two weights of cloth is used to provide the optimal balance between warmth and low weight. Anatomical cut, pleasant softness, a good hang and excellent packability. The ideal accessory for alpine skiing tours, freeride or ordinary downhill skiing.

Material

Main: Pertex Quantum Air (100% PAD, DWR - acrylic coating) - [U01]

Insulation: PrimaLoft® Gold Active

133g/m² and 60g/m² (100% PES) - [I04]

Support: Abrasion resistant fabric (84 % Nylon + 16 % Elastan) - [F06]

Weight: 320 g (L)

Sizes: S, M, L, XL, XXL

Style: REGULAR FIT

Features

- Elastic waist with a belt.
- Zip pocket in the waist for packing.
- Knees with rear insulation of weightier material (133g/m²).
- Seat and crotch from an airy, highly elastic knitted fabric for maximum comfort and breathability.
- Diagonal, specially shaped fully-closable zips on the side for easy dressing without having to take off your boots, skis or crampons. Can also be used for ventilation during more exertive activities.
- The bottom edge of the leg can be adjusted using an elastic strap with velcro.
- Fly with longer two-way zip that can be used even when wearing a seating harness.
- The fastening on the shoulder straps are located so that when used with other DA pants with suspenders all fasteners can be attached to the one set of suspenders.

Dragon

NEW

Dragon is our brand new technical insulated jacket with a hood intended for enthusiastic sportsmen and women looking for maximum performance.

It's produced from a very light material, Technostretch® Grid Fleece. Its inner structure is made up of individually positioned plastic squares. Thanks to this pattern, the space between one's body and the material holds a layer of warm air and at the same time wicks away excess body moisture. This material has, of course, high 4- directional stretchability and excellent packability. The simple, smooth design is to keep the weight to a minimum with only the bare essentials: a close- fitting hood sufficiently deep to cover the whole head, neck and forehead, and two zip-pockets. The anatomical technical cut is derived from the natural shape of the human body and its movement during sport. Raglan sleeves allow free movement during climbing sports and are sufficiently long to cover the wrists, even when both arms are stretched high. The back section is extended to cover the lower back area. This is a universal jacket for sports at all levels, no limits.

Material

Main: Tecnostretch grid Fleece (91% PES + 9% Elastan) - [F01]

Weight: 295 g (L)

Sizes: S, M, L, XL, XXL

Style: SPORT FIT

Features

- Firm hood with elasticated hem.
- Main zip has protective stop in the chin area.
- Shaped Raglan sleeves with elasticated ends.
- One zipped side pocket on the right side.
- One breast pocket with a zip.
- Extended back part.
- Decorative double stitching on individual parts, decorative details.

OUTDOOR SERIES

For many seasons now we have been developing products of the Outdoor Active serie for the broader outdoor public. These are reliable models for everyday outdoor events.

But as a result of the quality of the materials and careful workmanship, they can also be used under the most demanding conditions.

The casual and very comfortable cuts and naturally also the use of high-quality functional materials guarantees the customer excellent comfort both for the regular outdoors and during everyday wear. We pay great attention to the design of the cut and all the details.

The common trait of the models from this series is great value for invested money. The models of the Outdoor Active Serie are distinguished by their imaginative, creative design with technical elements and well-designed details. The colours and details are based on current trends.

For this series our customers always appreciate the typical merits of DIRECT ALPINE brand products, mainly pure utility, quality and perfect workmanship.

Talung

BESTSELLER

LADIES TALUNG LADY PAGE 61
VERSION

A practical waterproof jacket for most normal outdoor activities based upon our most successful hardshell jacket, Guide.

It's made from a light triple-layer material giving excellent protection against water penetration while allowing humidity out. The adjustable hood is precisely cut with a peak. The shoulder and side panels are reinforced for increased protection against mechanical damage.

The two main side zip pockets are easily accessible even with the tummy strap of your backpack fastened or when wearing a harness. In addition there is a spacious breast pocket. The anatomically shaped sleeves have easy-to-use zip vents in the back section. Thanks to the elasticated waist the jacket adapts wonderfully to your base-layer of clothing. The bottom edge of the jacket is anatomically shaped for maximum comfort and is fitted with a drawstring which can be tightened with one hand.

Features

- Stiffened hood with adjustment.
- Ventilation openings in the back of the sleeves, easily reachable even when wearing a backpack.
- Easily accessible side pockets, one spacious breast pocket.
- Adjustable strap in the rear panel (for a closer fit to the back).
- Anatomically shaped sleeves; adjustable cuff opening.
- Extended back section.

Material

INNOVATION

An attractive functional jacket in a new improved design.

A highly effective combination of materials – cotton spandex and a resistant material, Dupont Sorona, both treated with Hydrophobic Extreme repellent.

The combination of elastic natural fibers with state-of-the-art technology and lighter, more resistant materials assures great overall functionality. Hydrophobic Extreme impregnation increases the lifetime of the fibers and the level of protection against water and improves breathability as well as protecting from soiling. The jacket not only protects against inclement weather and light rain but also remains very breathable. Its anatomical cut along with elastic materials ensures high wearer comfort and wonderful arm movement. Great for trekking, hiking, trips to the mountains or even everyday wear. Thanks to the materials used and the production technology, this product is very ecological with regard to production and sustainability. The use of Hydrophobic Extreme repellent, applied during production using a dry plasma method, gives the garment a very long user life. This treatment works even after dozens of washings. Its functionality is renewed just by ironing the fibers.

Material

Main: High density fabric (98 % cotton + 2 % Lycra, DWR) - [W04]

Support: Abrasion resistant fabric Sorona®

(60 % Nylon + 40 % PES, DWR) - [W05]

Reinforcement: (59 % Nylon + 33 % PES + 8 % PUR) - [R02]

Weight: 741 g (L)

Sizes: S, M, L, XL, XXL

Style: REGULAR FIT

black black/brown petrol

Ret: 3,0
m². Pa/W

Features

- Hood with a sufficiently long peak, fully adjustable.
- Asymmetrical main zip doesn't press across the chin.
- A second zip at the chin allows for effective ventilation of the jacket while giving high protection to the face even in harsh climatic conditions.
- Shoulders and elbows reinforced with fray resistant fibers.
- Anatomically shaped sleeves allow free arm movement. Adjustable shaped sleeve cuffs.
- Two breast pockets with zips, two side zip-pockets which can be used as ventilation.
- Bottom edge of the jacket has simple (one-handed) adjustment.
- Front part is shorter, shaped for freer leg movement.
- Seams: special cored, water expanding thread for increased water resistance of stitching (100% cotton core knit).
- Extended rear part.

HYDROPHOBIC EXTREME:

It is hydrophobic and oleophobic finishing of textiles, be it cloth, webbing or nonwoven textiles.

A thin layer of impregnation is created on the surface making it extremely water-repellent and oleophobic.

Hydrofobic Extreme finishing developed by NANOMEMBRANE involves every single fiber being coated with a thin layer of nanoparticles. The result is an extremely high level of hydrophobic and oleophobic finishing that prevents water, wine, coffee or grease from making stains on the surface of the textiles or even damaging them. This results in a self-cleaning effect similar to that of lotus leaves.

In contrast with commonplace hydrophobic and oleophobic finishing processes, interfiber pores are not blocked, which prevents deterioration of conducting moisture from skin through the textile. Furthermore, it is possible to launder the coated surfaces using commonplace detergents and it has been scientifically proved that Hydrofobic Extreme is at least four times more durable than other materials. This in return saves the customer time and money."

Ret: 3,0
m². Pa/W

Apache

This very universal model is suitable both for long travels and spending time in the wild as well as for regular use in everyday life.

In designing them, emphasis was placed on creating pants with high durability and robustness while maintaining extra wearer comfort. The main material – cotton lycra – is supplemented in vital parts with a tried and tested, highly fray-resistance material, as used, for example, in our legendary Patrol pants. Both materials are treated with Hydrophobic Extreme water repellant– a plasma treatment applied directly to the dry material to ensure long-lasting resistance to water and dirt and, at the same time, guaranteeing perfect breathability. Thanks to the highly developed cut and cleverly positioned sections of stretch fabric these pants fit perfectly. In warm weather or during sports the side zips on the legs give welcome ventilation. Durability, high comfort, and protection against water are the main selling features of this new model.

Thanks to the sourcing of these materials (cotton and synthetics from renewable sources) this product is fully ecological and places no strain on the environment. The repellant is applied in a dry method using plasma which leaves no waste material and also minimizes the release of repellant during washing. The material is easily recyclable and thus very favorable from an environmental point of view.

Features

- Waist fitted with loops for Directalpine belts.
- Two front zip pockets, roomy, practical, zipped bellows pockets on the thighs big enough for a map, two rear zip pockets.
- Comfortable elasticated crotch.
- Zippable side vents.
- Anatomically shaped knees.
- Bottom edge of the pants reinforced with highly tear-resistant material.
- Poppers for adjusting the leg endings and an elastic cord to hook onto boots.

LAMIES BADILE LADY PAGE 64
VERSION

These popular pants for all-year-round use in a modern design. Ideal for trekking, mountaineering, hiking and all outdoor activities.

The anatomical cut, proven over years of use, guarantees comfort for every wearer. They utilize a purposeful combination of two types of very durable, stretch material with an inner Coolmax layer and a basic quick-dry treatment (removal of evaporating body moisture). This is supplemented with Cordura for an extra thermo-insulation inner layer on the knees and bottom (increasing body temperature). The construction of these pants allows for the absence and repositioning of some seams so eliminating possible damage to them. These have long been the best-selling technical pants from DIRECT ALPINE, very popular and proven, so much so that our customers have affectionately dubbed them their 'second skin'.

Material

Main: High strenght functional fabric
(78 % Nylon + 10 % Coolmax® +12 % Lycra®) - [W07]

Support: Abrasion resistant brushed fabric
(23 % Cordura® + 45% PAD + 23 % Thermolite® + 9 % PUR) - [W02]

NEW

Gavia Tech

A new, technically perfect insulated sweatshirt specially developed for spending cold days actively and for all (and not only) winter sports – skiing, one-day alpine skiing or backcountry expeditions, mountaineering activities or leisurely cross-country skiing.

This sweatshirt combines the properties of two functional materials. Panels protecting the torso and neck area, in front and behind, are insulated with a stronger stretch material, Technostretch® for a higher level of insulation. Panels which require higher flexibility for maximum freedom of movement, higher breathability and lower insulation are made from a new, very light elastic technical material, Technostretch® Grid Fleece. The inner structure of this material is made up of individually positioned plastic squares. Thanks to this pattern, the space between one's body and the material holds a layer of warm air and at the same time wicks away excess body moisture. Its simple, smooth design keeps weight to a minimum and has been trimmed down to the bare essentials. It has just one breast pocket, which is laser cut and glued. The technical cut is derived from the natural shape of the human body and its movement during sport. The anatomically shaped elbows and Raglan sleeves allow free movement in ski sports and are sufficiently long to cover the wrists even when you raise both arms up high. We've extended the back section to cover the lower back.

Features

- A functional combination of two technical materials
- Main zip with protective stop in the chin area
- Anatomical cut
- Extended back part
- Higher collar with panel construction
- One breast pocket with a zip
- Anatomically shaped raglan sleeves with elasticated hems.

INNOVATION

A corduroy classic in a new 'trendy & cool' design intended for the office to the countryside.

Innovatively styled, comfortable climbing pants made from a mixed cotton material, these are aimed mainly at young climbers who want to go straight from work to the rocks or climbing wall without unnecessary changing and loss of time. The main corduroy material used, thanks to its high cotton content, is pleasant to the touch and guarantees a feeling of comfort. The additional polyamide takes care of resistance to mechanical damage. Stretch fibers in the material give it high flexibility which for climbwear is essential. Details using abrasion resistant material highlight the rear pocket and the edges of the side slash pockets. This young trendy and, at the same time, climbing design, is prepared for any kind of challenge – sporting ones or even those from everyday life. The perfect and very modern slim cut, with its anatomically shaped knees and crotch insert, perfectly copies the curves of the body and at the same time provides an extremely high level of free movement.

Material

Main: Cord fabric (79 % Cotton + 19 % PAD + 2 % Elastan) - [W08]

Support: High abrasion resistant fabric

(60 % Nylon + 40% SORONA) - [W05]

Features

- Anatomically shaped slim cut.
- Shaped knees.
- Loose leg endings.
- Two side slash pockets with zips.
- Pocket hems decorated with a durable material.
- Two back pockets with zips, left pocket of a different color and material.
- Crotch insert.
- Firm waistband with loops for Direct Alpine belts.
- Zipped fly.
- Pop fastener on the waistband.
- Decorated with contrast quilting.

Weight: 454 g (L)

Sizes: S, M, L, XL, XXL

Jump

NEW

This new stylish and comfortable climbing jacket with a hood has been designed precisely for the kind of sports that unite us- climbing, bouldering, slackline and a generally more relaxed tempo.

We've focused on high user comfort, functional details in all the right places, and a perfect cut. The main cotton mix material has a higher density, is pleasant to the touch and guarantees a feeling of comfort as well as the required level of heat insulation and resistance to mechanical damage. Stretchability, which is essential in climbwear, is a matter of course. The overall impression is completed by details from light, resistant rip-stop elastic material which at the same time increases the overall durability and user life. Thanks to these details, its attractive, inventive climbing design, is tuned to perfection. The deep looser hood, which can be drawn around the face, and two-layer construction makes use of a warm cotton material which feels pleasant and doesn't rustle around your ears. The outer rip-stop material has a protective function. The anatomically shaped Raglan sleeves and the bottom edge of the jacket are finished with ribbed knit and reliable hold the garment in place. All this goes to provide maximum freedom of movement.

Material

Main: 3-thread fleece (63% Cotton + 37% PES) - [F05]

Support: Rip-stop stretch fabric (85 % Nylon + 15 % Spandex, DWR) - [W01]

Weight: 511 g (L)

Sizes: S, M, L, XL, XXL

Style: REGULAR FIT

LADIES SERIES

We've answered the wishes expressed by our women customers, and for the first time in Direct Alpine's history, we're presenting a collection purely for women – the Ladies Series. The series includes models designed purely for mountaineering, others for hiking, and others too for women who enjoy an active lifestyle or just want to get about town in comfort.

These clothes are designed carefully to match the shape of a woman's body – narrower shoulders and waist, broader over the hips. The smart cut, hybrid use of functional materials, and full use of the direction of stretch, all make optimal use of the spaces inside the clothing, and ensure maximum freedom of movement and thermal comfort.

The entire collection comes in attractive feminine colours. Our designers have taken great care to ensure that individual products can be mutually combined, whether in terms of function or colour. Harmonizing your look by combining different garments is very simple, and you can swop them round not only to match the weather, but your mood, too.

Thanks to the quality of the material and craftsmanship, superb wear-ability and our emphasis on ensuring the combinability of variously coloured versions, our customers dressed in the Ladies Series will not only feel great, but also look great – whatever their destination.

Guide Lady

BESTSELLER

PRODUCT TIP PANTS MIDI PAGE 13

GUIDE LADY is the top quality technical jacket every woman should have; a clear choice for trips to the mountains, alpine skiing or demanding treks.

The main features of this model are minimal weight, great packability and, at the same time, as long-lasting and robust as a classic three-layer hardshell. The wonderful parameters of the membrane and backed seams keeps it waterproof. The jacket has a precise, anatomically fitting cut, a range of technical details and makes use of modern technology. All this makes it a top quality mountain jacket even for extreme conditions. A model for the active woman who lives for the outdoors and wants to feel good in every kind of weather.

Freya Lady

Insulation
INNOVATION

The elegant FREYA winter jacket will be a boon to all ladies who want to emphasize their sporting image and at the same time feel comfortable and at ease.

A great choice for cold winter days, for demanding mountain events or for any kind of outdoor activity. The inner material, Pertex Quantum Air, gives perfect wind protection. The insulation layer is purposely divided into a hybrid arrangement: the main body of the garment is created from a heavier, warmer material to ensure high protection against the cold, while the sides and sleeves use a lighter insulation for better breathability and freer arm movement. The result is a very light, packable, and at the same time beautiful, warm jacket. Freya is highly suitable for winter mountain crossings, climbing and alpine skiing, but also, because of its interesting and attractive design, it can even be worn for everyday wear.

Material

Main: Pertex Quantum Air (100% PAD, DWR - acrylic coating) - [U01]

Insulation: PrimaLoft® Gold Active 133g/m² and 60g/m² (100% PES) - [I04]

Block Lady

Cut
INNOVATION

An attractive, insulated ladies' jacket, great for trips to the mountains or to town.

Its hybrid design makes ideal use of the key properties of these top-quality materials for maximum functionality, comfort and protection. An effective quilted ultra-light outer material with an inner layer of PrimaLoft insulation protects the mid body and shoulders. The side parts are from a light, elastic material, Tecnostretch. Thanks to these elasticated parts the jacket fits to the body extremely well, adapting to the base layer clothing. This makes it very usable for a wide variety of outdoor and sports activities in colder weather as well as for everyday wear.

Material

Main: Ultra light fabric (100% Nylon) - [U04]

- Comfortable elasticated waist.
- Elasticated inserts in the side made from a warm stretch material for increased freedom of movement.
- Stylish embroidered logo on the front.
- Can be packed tightly into the inner pocket (minimal weight and volume).

Tanama Lady

Cut
INNOVATION

TANAMA is a universal ladies softshell hooded jacket which is a reliable, high quality essential to your wardrobe. It's ideal for day trips to the fall or winter countryside, everyday casual wear, travel to work or out with the kids.

Their smooth design incorporates essential functional details to make life easier, whether in the town or countryside. The hood is sufficiently deep to protect the whole head and when fastened fits snugly to your face. The stretchy softshell material is rain-resistant and reliably ventilates excess heat, even during light aerobic exertion. The pleasant inner side of the material enables it to be worn against the skin. The simple cut fits to the curves of the female body, utilizing the natural elasticity of the material and giving maximum freedom of movement. The Raglan sleeves fit perfectly whether you have broad or narrow shoulders. As TANAMA doesn't have an overtly sporty appearance it can suit a wide spectrum of uses. It's the ideal solution for everyday wear and for less demanding activities on cold days.

Material

Main: 3L 4way Tex® softshell
10.000 mm H₂O/10.000 g/m²/24H (DWR) - [S03]

Weight: 555 g (M)

Features

- Two side zip-pockets as well as two easily-accessible slash pockets.
- One breast pocket with a zip.
- Adjustable hood with an elastic drawstring and fastener at the back of the head.
- Elasticated hem on the hood.
- Main zip with protective stop in the chin area.
- Raglan sleeves with elasticated hems.
- A simple, easy-to-use elasticated drawstring in the shaped hem of the jacket.
- Decorative double stitching of individual parts, decorative details.

Sissi Lady ^{Cut} INNOVATION

These innovative universal ladies SISSI softshell pants are a reliable, high-quality essential item for the wardrobe of every sports-loving girl!

For day trips, fall or winter outings in the countryside, taking the kids to the playground or even travelling to work on cold mornings. The smooth design of SISSI pants incorporates essential functional details to make life easier, whether in the town or countryside. The two side zip pockets are supplemented by a flush open pocket on the hip for your cellphone, car keys or small change. The flexible softshell material allows free movement and provides wearer comfort. The pleasant inner side of the material enables them to be worn next to the skin and for universal use. The simple, elegant cut utilizes the natural elasticity of the material, copying the curves of the female body and gives them a light, sporty look. The ideal solution for every day wear and all aerobically demanding activities on cold days.

Material

Main: 3L 4way Tex® softshell
10.000 mm H₂O/10.000 g/m²/24H (DWR) - [S03]

- One open slash pocket on the right hip.
- Zipped fly.
- Adjustable waistband with loop and hook.
- Decorative double stitching on the legs and back.
- Reflective stitching on the bottom edge of the side pocket.
- Water-resistant zip at the bottom of the legs for widening them and to go over high boots.
- Leg cuff aperture can be adjusted using the Velcro fastening.
- Detachable braces.

Badile Lady

These popular pants for all-year-round use now come in a modern design. Ideal for trekking, mountaineering, hiking and all outdoor activities.

The anatomical cut, proven over years of use, guarantees comfort for every wearer. They utilize a purposeful combination of two types of very durable, stretch material with an inner Coolmax layer and a basic quick-dry treatment (removal of evaporating body moisture). This is supplemented with Cordura for an extra thermo-insulation inner layer on the knees and bottom (increasing body temperature). The construction of these pants allows for the absence and repositioning of some seams so eliminating possible damage to them. These have long been the best-selling technical pants from DIRECT ALPINE, very popular and proven, so much so that our customers have affectionately dubbed them their 'second skin'.

Material

Main: High strenght functional fabric
(78 % Nylon + 10 % Coolmax® +12 % Lycra®) - [W07]

Support: Abrasion resistant brushed fabric
(23 % Cordura® + 45% PAD + 23 % Thermolite® + 9 % PUR, DWR) - [W02]

Weight: 432 g (M)

Sizes: XS, S, M, L, XL, XXL

Style: REGULAR FIT

black/black indigo petrol/indigo

Features

- Partly elasticated waistband, adjustable belt with buckle.
- Two front pockets and one side pocket, easily accessible even when wearing a seat harness. Uses elasticated stitching technology.
- Basic mixture of fibers supplemented with Coolmax® fibers (moisture removal).
- Shaped knees and seat from Cordura® fray-resistant fibers.
- Elastic side inserts in the leg bottoms for pulling over footwear (even over ski boots). Adjustable leg cuff with elasticated drawstring..

Eira Lady

INNOVATION

A ladies' jacket in an attractive new design this is, as they say, a must for all ladies feeling the chill.

A top-quality, soft and elastic knit from premier producer, Polartec-Thermal Pro provides wonderful warmth and comfort. The hood, breast pocket, sleeve ends and bottom hem are reinforced with a more durable material for greater protection against fraying. The looser anatomical cut sits pleasantly and provides comfort even in the most demanding sports or outdoor activities so you can use it for various expeditions in the countryside, trekking, climbing or even for everyday casual wear. The reflective elements on the jacket increase wearer safety in reduced visibility conditions.

materials:

4wayTex®

4wayTex®

4WAYTEX is a trademark of Direct Alpine company materials of sandwich construction, which individual layers, properly combined, ensure excellent product parameters. SOFTSHELL 4WAYTEX is focused for excellent permeability of laminate along with maintaining low weight and sufficient wind and waterproofness.

Swing Cool

Soft and comfortable fabric, keeps cool and dry. Long lasting performance – wash after wash.

Coolmax®

Coolmax® is a high tech fabric specifically and uniquely engineered to keep users dry and comfortable. Coolmax® fabrics are made from specially engineered polyester fibres from ADVANSA with an increased surface area. This special four-channel or six-channel fibre forms a transport system that pulls moisture away from the skin to the outer layer of the fabric. For example products: BADILE, CASCADE PLUS, MISTRAL.

Cordura®

CORDURA® fabric is durable, versatile and reliable. Constructed using high tenacity fiber technologies.

Dermizax™

Dermizax™ is a 3-layer laminate with a waterproof, windproof, and wicking membrane that is specially developed to provide protection against all kinds of weather while remaining as comfortable as possible. Dermizax™ membrane is a hydrophilic material that utilizes moving molecules, as opposed to most other membranes which have micropores. This offers a number of advantages and makes Dermizax™ shell clothing the very best on the market thanks to its high performance and superior durability.

Dynamic softshell

2-3 layer laminate with excellent permeability. Material developed with particular focus on vapour-permeability along with low weight and sufficient wind and waterproofness. Weight-light, flowing laminate with inner fleece insulating layer.

DuPont Sorona – Espol

Sorona® renewably sourced fiber delivers superior performance benefits to sustainable clothing. Fabrics that use Sorona® are very soft, very strong and dry quickly. Sorona® helps fabrics stretch comfortably and retain their shape. Sorona® contains 37% annually renewable plant-based ingredients by weight..

Freshcool

Freshcool combines 2 technologies into 1 textile. Outside protects the textile from water, dirt and stain. Inside moisture from the skin is absorbed and quickly transmit to the outside.

Gelanots

Soft and flexible with only thin PU membrane, but advanced in waterproof & windproof & breathability. Offering high level of comfort by its hydrophilic monolithic membrane (non porous). Eco – friendly non fluorinated fabric. Made by Toyota Tsusho (Japan).

Gelanots HB

A polyurethane hydrophilic monolithic membrane with extreme thinness (12 – 15 micron). In addition to maintaining the basic features of waterproofness and windproofness, this membrane will keep you comfortable under wet and humid conditions through its high breathability up to 39.000 g/m²/24h in B1 testing. Eco – friendly non fluorinated fabric. Made by Toyota Tsusho (Japan).

Gelanots DryShell

A revolutionary hardshell material which, thanks to a combination of an ultra-thin membrane and special lining, achieves extremely high values for breathability (Moisture vapour transition rate up to 55.600 g/m²/24h) while at same time having a very good water resistance value (hydrostatic head). This so-called 3D- effect membrane is based on a combination of a two-fibre mix (nylon + polyester) with a special three-dimensional structure which significantly increases the capillary effect. Damp is maximally dispersed through the structure of the material and effectively carried to the ultra-thin membrane which then ensures its transportation outwards to the surface of the hardshell. This system has exhibited top values for breathability (up to 55.600 g/m²/24h) along with very good values for water resistance.

Hybrid system

The main aim of the Hybrid system is to find the balance (joining different kinds of materials) or optimal functionality of the product ("WV" – waterproof, windproof, vapour permeability). It is often the case of joining membrane and non-membrane materials, completed with functional knitting to optimise the functionality. For example products: CASCADE PLUS, BLOCK, TOFANA.

Hydrophobic extreme

It is hydrophobic and oleophobic finishing of textiles, be it cloth, webbing or nonwoven textiles. A thin nano layer of fluorocarbon is created on the surface making it extremely water-repellent and oleophobic. Hydrofobic Extreme finishing developed by NANOMEMBRANE involves every single fiber being coated with a thin layer of nanoparticles. The result is an extremely high level of hydrophobic and oleophobic finishing that prevents water, wine, coffee or grease from making stains on the surface of the textiles or even damaging them. Highly eco friendly - no water used during the treatment of textile.

Pertex Shield®

It offers a unique protection against wind and rain in combination with excellent breathability. It is an elastic 3-layer softshell with a hydrophilic, non-porous membrane. The top layer is made up of a durable fabric a mixture of PES + PAD, the lower layer of fine polyester. Thanks to the unique lamination method, the material has excellent water resistance and, at the same time, excellent vapor permeability.

Pertex Quantum®

Pertex Quantum™ is the lightest fabric Pertex makes. It is a true featherweight at around 30 g/m². They use the finest yarns available to them with the maximum thread count. Pertex Quantum® stands its ground and shows the best strength to weight ratio.

Pertex® Quantum Air

Pertex® Quantum Air is engineered with increased air permeability to provide a balance between wind resistance and breathability. The more openly woven structure of Quantum Air fabrics allows airflow through the fabric, which helps to regulate your body heat and keep you comfortable for longer. This balance of air permeability and wind resistance means Pertex® Quantum Air fabrics are perfectly suited to intense mountain pursuits.

Pertex® Quantum Pro

Pertex® Quantum Pro uses an ultra thin water resistant coating to provide increased weather resistance for extreme conditions. By combining a tightly woven face fabric with a microporous coating, Pertex® Quantum Pro delivers a very high level of water resistance whilst remaining lightweight, soft and breathable. The increased weather resistance and durable construction means these fabrics are ideal for use in cold or damp environments where keeping warm and dry is crucial.

Polartec® Alpha®

Polartec® Alpha® is the latest evolution of synthetic insulation offering a rare combination of lightweight warmth and true breathability in a „puffy“ style garment. Because Polartec Alpha insulation is highly durable and more stable than other synthetic insulation products, more open-construction woven face and back fabrics can be selected to create an air permeable package. This small amount of airflow rapidly draws moisture away from the body and allows Polartec Alpha to be worn in a wider range of activities compared to classic „vapor barrier“ style insulation.

Polartec® Power Stretch Pro®

Polartec® Power Stretch® fabrics feature body-hugging 4-way stretch and are very breathable. Many of the fabrics feature a proprietary construction with two unique surfaces: the durable, smooth outer layer is wind and abrasion-resistant; the soft inner layer pulls moisture away from skin keeping dry, warm and comfortable.

Polartec® Thermal Pro®

Polartec® Thermal Pro® was developed to bring a wider variety of styles and performance functionality to synthetic fleece technologies. By reengineering our construction methods we created an expansive platform of fabric structures with superior benefits over traditional fleece. These unique textures enhance the fabric's overall efficiency and are the defining reason why synthetic fleece will never go out of style as the preferred choice for performance insulation fabrics.

Polartec® Power Fill

Hot news from the American manufacturer Polartec. A special yarn made from PED hollow-fiber threads forms thousands of air pockets that retain body heat even under the most extreme conditions. The material is combined in several basis weights, which ensure the maximum functionality of the whole. The material Power Fill consists of 80% recycled polyester. Excellent performance in humid environments is guaranteed by the hydrophobic treatment of fibers, which also dry very quickly.

PrimaLoft® Silver

PrimaLoft® Silver is a premium performance insulation engineered for superior warmth, water resistance, loft, softness and compressibility. PrimaLoft® Silver insulation keeps the body warm, dry and comfortable, even in extreme conditions.

PrimaLoft® Gold

PrimaLoft® Gold Active is the highest performing insulation on the market for warmth, water resistance, softness and compressibility. PrimaLoft® Gold Active is an ultra-fine microfiber insulation that is as warm, soft and lightweight, and is warmer wet or dry than all other insulations.

PrimaLoft® Thermo Plume

It is a unique synthetic material that combines the unique properties of feathers and synthetic insulation. Thermo Plume guarantees loft, foldability and feather-resembling thermo-insulating properties (equivalent to 550 + cuin) while retaining all the benefits of traditional PrimaLoft, such as water resistance, light weight and easy care. The tufts of insulation Thermo Plume give the clothes an excellent Thermo-insulating performance even at very high humidity, the clothing remains permeable to air and dries very quickly.

Richter by Südvolle

100% merino wool made of best quality Sudwolle yarn. Thanks to its unique fibre structure has merino unique warmth, anti-bacterial ability and is odour resistant. Absorbed moisture becomes warmer very quickly so wet garment does not chill. All listed unique abilities makes Merino garments perfect choice for any outdoor activity.

Tecnostretch

Pontetortec Tecnostretch, is ideal for base and mid layering. The component yarns make the face durable, whilst the polyester reverse has both insulation and wicking properties - added elastomer ensures a body hugging fit.

Thermolite®

Thermolite® provides warmth and comfort without weight, even when wet. It's the lightweight fabric that provides heavy-duty performance made with ADVANSA engineered hollow-core fibres that trap air for greater insulation. Thermolite® is the perfect layering fabric because it's comfortable and lightweight, allowing more freedom of movement.

Envilon

The material contains 60% Nylon, which is obtained by recycling old fishing nets. At the same time, 30% energy and water are saved in the production process. The whole production cycle of the substance is therefore very gentle for the environment and at the same time waste from heavily polluted seas is collected.

NEVER OUT OF STOCK

Models which you can assume will always been in stock in standard sizes throughout the entire main sales season. Stock numbers are under constant monitoring, and if for non-standard, unanticipated reasons one of the sizes is sold out, operative additional production is prepared with a delivery period of approximately one month from your order. After the season, in the period of any post-season sales, it is no longer possible to guarantee full availability.
